Summary

Software Engineer with 1.5+ years of experience building full-stack and AI-integrated applications using React, Django, Node.js, and Python. Experienced in agentic workflows, MCP, Neo4j knowledge graphs, and real-time applications.

Experience

Junior Software Engineer, Kriyam.ai June 2025 – Present

- Owned end-to-end delivery of AI platform features, covering data modeling, backend services, integrations, and frontend workflows from design through production handoff.
- Built the credit-based monetization system for AI Agents and Tools, with an immutable usage ledger, configurable pricing, and transactional credit management.
- Engineered AI Tool usage and billing workflows with per-run/per-page pricing, admin-configured add-ons, upfront credit validation, and background settlement for long-running tasks.
- Shipped the Razorpay credit purchase flow, connecting order creation, payment verification, invoicing, ledger updates, and webhook-based reconciliation with recovery for missed events.
- Hardened server-to-server integrations with sliding-window rate limiting, HMAC request verification, and SSRF protection.
- Built the visual workflow product for multi-step AI automations, enabling users to create, validate, save, import, and execute LLM workflows through a React-Konva canvas, with MCP integrations and Redis-based real-time execution updates.
- Built a fraud-ring detection knowledge graph in Neo4j, modeling dynamic entities and relationships to support investigation across varied claim-fraud patterns.

Software Developer Intern, Geogo Techsolutions Feb 2025 – June 2025

- Designed database-backed Django APIs for mobile application integration, handling data models, API contracts, and cross-platform data flows.
- Reworked application interfaces across multiple routes using React and Material UI, delivering responsive layouts, dark/light themes, and interactive workflows with GSAP and Framer Motion.

Software Developer Intern, Starlab Technologies Oct 2024 – Dec 2024

- Designed database schemas and authentication APIs, establishing the data and access-control layer for application workflows.
- Built an authenticated file-upload pipeline using Multer and AWS S3, integrating validation, storage, and API workflows.
- Implemented WebSocket-based RFID communication to synchronize barcode data across remote systems, AWS services, and client applications.

Projects

Taskly — Next.js, TypeScript, Prisma, MongoDB [Github](#)

- Built a responsive project-management platform for project and workflow tracking.
- Implemented task management and persistent data workflows using Prisma and MongoDB.

Text-2-Speech — Next.js, TypeScript, Tailwind CSS [Github](#)

- Built a responsive web app for converting text to speech across multiple accents.

Technologies

Languages: Python, TypeScript, JavaScript, SQL, C/C++

Frontend & Backend: React.js, Next.js, React-Konva, Django, FastAPI, Node.js, Express.js, AdonisJS

Data, Cloud & AI: PostgreSQL, MongoDB, MySQL, Neo4j, Redis, AWS S3 & SES, MCP, LLM Integration, Knowledge Graphs, WebSockets, REST APIs, Webhooks, Socket.IO

Education

Netaji Subhash Engineering College July 2021 – June 2025

Bachelor of Technology in Computer Science and Engineering

CGPA: 8.46
