## Summary

Software Engineer with 1.5+ years of experience building full-stack and AI-integrated applications using React, Django, Node.js, and Python. Experience includes AI workflows, billing systems, payment integrations, and real-time applications.

## Experience

**Junior Software Engineer**, Kriyam.ai

June 2025 – Present

- Engineered core features for Kriyam's **multi-tenant AI platform**, building AI Agents, Tools, workflows, real-time executions, and billing systems across React, Django, Node.js, and PostgreSQL.
- Designed and shipped the **credit system** for AI Agents and Tools, handling credit allocation, balance management, and a traceable transaction history for usage and purchases.
- Built **usage-based billing** for AI Tools and Agents, supporting per-run and per-page pricing, configurable add-ons, upfront credit validation, and settlement for long-running executions.
- Designed and shipped **Razorpay payment infrastructure** for purchasing AI credits, covering payment verification, invoice generation, credit allocation, auto top-up, webhook reconciliation, and recovery for missed events.
- Secured external API integrations against unauthorized requests and abuse, implementing **HMAC verification, SSRF protection, and sliding-window rate limiting**.
- Built a **visual workflow builder** for multi-step AI automations, enabling users to create, validate, save, import, and execute workflows with MCP tools and real-time Redis updates.
- Built a **Neo4j knowledge graph** for fraud-ring detection, modeling claims, entities, and relationships to help identify patterns across different fraud cases.

**Software Developer Intern**, Geogo Techsolutions

Feb 2025 – June 2025

- Redesigned application interfaces using **React and Material UI**, delivering responsive layouts, dark/light themes, and interactive workflows with GSAP and Framer Motion.
- Contributed to the migration of **AI/ML services from AdonisJS to Django and React**, adapting backend APIs and frontend workflows to the new application stack.

**Software Developer Intern**, Starlab Technologies

Oct 2024 – Dec 2024

- Developed **user authentication and management** for a vehicle tracking system, covering database schemas, authentication APIs, and access-control workflows.
- Built a secure file-upload system using **AWS S3 presigned URLs**, handling file validation, direct uploads, and application API integration.
- Built real-time **RFID communication using WebSockets**, synchronizing barcode data across remote systems, AWS services, and client applications.

## Projects

**Taskly** — Next.js, TypeScript, Prisma, MongoDB

[Github](#)

- Kanban-based project-management platform for **organizing projects, tracking tasks, and managing team workflows**.
- Implemented task assignments and email notifications for project updates using Prisma and MongoDB.

**Text-2-Speech** — Next.js, TypeScript, Tailwind CSS

[Github](#)

- Text-to-speech web application using **gTTS** to generate speech across multiple accents.

## Technologies

**Languages:** Python, TypeScript, JavaScript, SQL, C/C++

**Frontend & Backend:** React.js, Next.js, React-Konva, Django, FastAPI, Node.js, Express.js, AdonisJS

**Data, Cloud & AI:** PostgreSQL, MongoDB, MySQL, Neo4j, Redis, AWS S3 & SES, MCP, LLM Integration, Knowledge Graphs, WebSockets, REST APIs, Webhooks, Socket.IO

## Education

**Netaji Subhash Engineering College**

July 2021 – June 2025

Bachelor of Technology in Computer Science and Engineering

**CGPA: 8.46**
