Summary

Software Engineer with 1+ year of experience building full-stack and AI-integrated applications using React, Django, Node.js, and Python. Experienced in agentic workflow platforms, knowledge graphs with Neo4j, MCP tool integrations, real-time systems, and scalable frontend and backend services.

Experience

Junior Software Engineer, Kriyam.ai June 2025 – Present

- Built and maintained full-stack features across React, Django, and AdonisJS-based applications.
- Designed and implemented a credit-based usage system for **AI Agents and Tools** using **AdonisJS**, including credit allocation and consumption tracking and RazorPay payment integrations.
- Developed an **agentic workflow platform** using **Django**, **React**, and React-Konva for visual multi-step workflow orchestration.
- Built Django backend services for agentic workflow execution with **MCP tool integrations**, enabling LLM-powered tool usage.
- Implemented Redis-based event relays and real-time streaming for workflow execution and chat updates.
- Designed and implemented a **Neo4j** knowledge graph to model entities and relationships for structured data retrieval and AI-driven processing.
- Developed an interactive React-Konva workflow canvas with draggable nodes, connectors, zoom/pan, and dynamic state management.

Software Developer Intern, Geogo Techsolutions Feb 2025 – June 2025

- Developed Django backend APIs supporting mobile application integration and consistent data flow across platforms.
- Revamped UI/UX across multiple application routes using React and Material UI, implementing responsive dark/light themes and resolving usability issues.
- Implemented interactive UI animations using GSAP and Framer Motion and optimized application flows based on user feedback and modern UX practices.

Software Developer Intern, Starlab Technologies Oct 2024 – Dec 2024

- Designed database schemas and implemented authentication APIs for secure user access.
- Built an authenticated file upload pipeline using Multer and **AWS S3** for scalable object storage.
- Implemented real-time RFID reader communication using WebSockets, synchronizing barcode data between remote systems, AWS services, and client applications.
- Developed a meeting scheduler with Google Calendar integration and automated email notifications using **Nodemailer**.
- Built a lightweight RFID reader installer for remote systems using Python, **Tkinter**, and **Pystray**.

Technologies

Languages: Python, TypeScript, JavaScript, C++ , C, SQL

Frontend: React.js, Next.js, React-Konva, HTML, CSS, Tailwind CSS, Material UI

Backend: Django, FastAPI, Node.js, Express.js, AdonisJS, Flask

Databases: MySQL, PostgreSQL, MongoDB, Neo4j

Cloud & Infrastructure: AWS S3, Redis

AI & Integrations: MCP, LLM Integration, Knowledge Graphs

APIs & Real-Time: REST APIs, WebSockets, Socket.IO, Webhooks

Development: Git, GitHub, Authentication & Authorization, Database Design

Education

Netaji Subhash Engineering College July 2021 – June 2025

- Bachelor of Technology in Computer Science Engineering
- GPA: 8.46
